

Due to licensing, we cannot include the MySQL jar file. So here is the link for it.

<http://dev.mysql.com/downloads/connector/j/5.0.html>

Direct link: <http://cdn.mysql.com/Downloads/Connector-J/mysql-connector-java-5.0.8.zip>

And from that download, the only thing you care about is this one file: mysql-connector-java-5.0.8-bin.jar

Place that somewhere, and in the user config, choose this file as your db_driver_file. Then test.

```
/* Script for MYSQL to make the DB tables needed for CrushFTP. */
```

```
# Dump of table DOMAIN_ROOT_LIST
```

```
# -----
```

```
